The ATRA 10V helmet has been designed to protect the user's head against falling objects. It meets the requirements of the EN 397 standard and can be used in the temperature range of -30°C / +50°C.

It is characterized by high strength, low weight and a wide adjustment range. In the helmet shell made of ABS, there are 10 ventilation holes ensuring users' comfort even on hot days.

ATRA 10V is equipped with universal 30 mm sockets that allow the installation of additional equipment such as earmuffs or face protectors.

Each helmet includes:

- helmet shell
- chin strap (attached to the helmet shell in 4 points)
- support tapes (attached to the helmet shell in 6 points)
- main harness headband with a convenient adjustment mechanism carried out with a knob
- removable, velour sweatband

The originally packed, an unused helmet may be stored, under appropriate conditions, for a maximum of 5 years from the manufacture date.

After the first use, under normal conditions *, the helmet can be used for a maximum of 5 years.

The influence of external factors from the environment in which the helmet is used has a large impact on its mechanical performance. Inadequate storage conditions, lack of regular cleaning of the helmet, or excessive exposure to chemicals or UV radiation, can result in shorter shelf life. Shelf life should not be understood as a warranty.

TYPICAL APPLICATION:

working at height / construction industry / forestry / industry.

Headband regulation

The integrated regulation **mechanism padding** has **a light, soft and flexible design** that ensures comfortable and hygienic use.

Seamless regulation of the headband circumference by a knob adjustment range 51-63 mm.
